STAT2203 Assignment 6

Question 2

Let

$$\beta = \begin{pmatrix} \mu \\ \alpha_1 \\ \alpha_2 \\ \alpha_3 \end{pmatrix}$$

If $\alpha_4 \equiv \alpha_1 + \alpha_2 + \alpha_3$, then

$$A = \begin{pmatrix} 1 & 1 & 0 & 0 \\ 1 & 1 & 0 & 0 \\ 1 & 0 & 1 & 0 \\ 1 & 0 & 1 & 0 \\ 1 & 0 & 0 & 1 \\ 1 & 0 & 0 & 1 \\ 1 & 1 & 1 & 1 \\ 1 & 1 & 1 & 1 \end{pmatrix}$$

Therefore $\varepsilon \sim N(\mathbf{0}, \sigma^2 I)$

Question 3

$$\mathbb{E}\left[\frac{1}{\hat{\lambda}}\right] = \frac{1}{\lambda}$$

$$\operatorname{Var}\left(\frac{1}{\hat{\lambda}^2}\right) = \frac{\left(\frac{1}{\lambda^2}\right)}{n}$$

$$= \frac{n}{\lambda^2}$$

Therefore the stochastic interval is:

$$\frac{1}{\lambda} \pm z_{1-\frac{\alpha}{2}} \frac{\sqrt{\frac{n}{\lambda^2}}}{\sqrt{n}}$$
$$\frac{1}{\lambda} \pm z_{1-\frac{\alpha}{2}} \frac{n}{\lambda}$$

Question 4

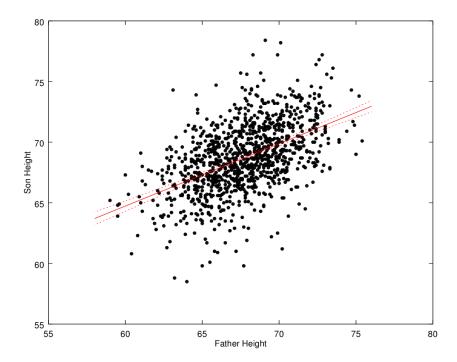

Figure 1: Question 4 Answer

```
load('PearsonFather.csv');
   load('PearsonSon.csv');
 2
 3
   x = PearsonFather;
    y = PearonSon;
 4
 5
   N = 1e3;
6
    xx = linspace(58, 76, N);
 7
    A = [ones(length(x), 1), x];
    beta = (A' A) \setminus A' y;
9
    sigma2 = mean((y - A * beta).^2);
10
    AAInv = inv(A' * A);
    for i = 1:N
11
        ax = [1 xx(i)];
12
        mux = ax * beta;
13
        sx = sqrt(sigma2 ax AAInv * ax');
14
15
        yy(i) = mux;
16
        yy1(i) = mux - 1.95*sx;
        yy2(i) = mux + 1.95*sx;
17
    end;
18
19
    figure(1);
20
    plot(x, y, 'k.', xx, yy, 'r-', xx, yy1, 'r:', xx, yy2, 'r:');
21
    xlabel("Father Height");
    ylabel("Son Height");
22
23 sigma2
```

 σ^2 is estimated to be 5.9335

Question 5

```
1 tbl = [13.8, 11.7, 14.0, 12.6;
2 12.9, 16.7, 15.5, 13.8;
3 25.9, 29.8, 27.8, 25.0;
4 15.2, 20.2, 19.9, 13.7];
5 anova(tbl)
```

This results in output equivalent to 0.2652
